

Log Store Fitting Instructions

Do not install whilst the stove is hot or in use. Observe safe working practices (please refer to the stoves Installation Guide) whilst installing.

The stove assembly is very heavy. Enlist the help of one or more persons to assist in the lifting of the stove onto this Log store. We recommend removing the door, grate bars, fuel retainer, and ash pan to ease the installation.

The Log store has been designed and tested to be used for the storage of wooden logs only.

Under no circumstances should any flammable material or solid fuels be stored within the vicinity of the stove or Log store area.

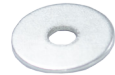

Small children and pets should be kept away from the log store compartment, by a suitable fire guard conforming to BS 8423:2002.

Included parts

1 Log store

2 Washers

2 Screws

2 Wing Nuts

Step 1

Remove the self levelling feet from both of your stoves rear legs.

Step 2

Attach the self levelling feet to the rear of the Log store. These can then be used to level the Log store when it is in situ.

Step 3

With the assistance of other people, lift the stove vertically onto the Log store whilst keeping it parallel.

Take Care. It is heavy!

Step 4

Use the washer, screw, and wing nut to secure the stove to the log store.
