

Door Catch Replacement Scroll Pin Fitting Guide

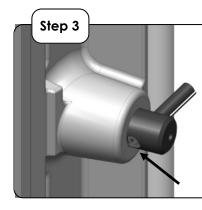

The following instructions and warnings should be observed whilst installing the scroll pin. Do not install into a stove whilst it is hot or in use. Observe safe working practices whilst installing or adjusting.

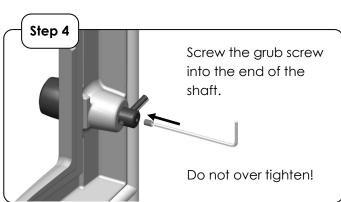

Insert the door shaft through the hole in the door.

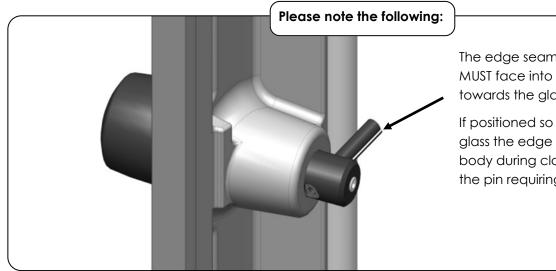

Ensuring the seam of the pin is facing away from the glass. Tap the scroll pin into the pin hole on the shaft until flush with the back face of the pin hole drilling.

Do not drive the pin further than the back face as it will impede the free rotation of the handle assembly.

The edge seam of the scroll pin MUST face into the fire box NOT towards the glass.

If positioned so as to face the glass the edge may snag on the body during closing and damage the pin requiring replacement.
